Cool .NET Buttons is a .NET Window's Button Control for C# and Visual Basic .NET developers. Simply place the control on your form then set some properties and you've got a professional looking button to impress your users! Cool .NET Buttons contains many properties for setting sound WAV file, speech text, button theme, button image, button forecolor/backcolor, button theme color, text with shadow effect, background image, etc. Cool .NET Buttons was written with Visual Basic .NET. When you purchase the control for only \$49.95 you also get the complete source code for FREE so you can customize the control to your liking!

How to add Cool .NET Buttons to your .NET project

1. Open Visual Studio .NET and create a new C# or Visual Basic .NET project
2. In VS 2003 right-click on the Windows Forms Toolbox and select "Add/Remove Items..." . In VS 2005 right-click on the Common Controls Toolbox and select "Choose Items..."
3. Select the .NET Framework Components Tab
4. Click the Browse button and add file C:\Program Files\SkySof Software Inc\Cool .NET Buttons\cbtns.dll. Click the OK button.
5. The control should appear in the Windows Forms toolbox as "CoolButton"
6. Double-click on the control to add to your form
7. Resize and move the control on the form as desired
8. Set desired button properties

Note: The Visual Basic demo source code for Cool .NET Buttons can be found at C:\Program Files\SkySof Software Inc\Cool .NET Buttons\demo.vbproj

Note: The C# demo source code for Cool .NET Buttons can be found at C:\Program Files\SkySof Software Inc\Cool .NET Buttons\demo_cs.csproj
